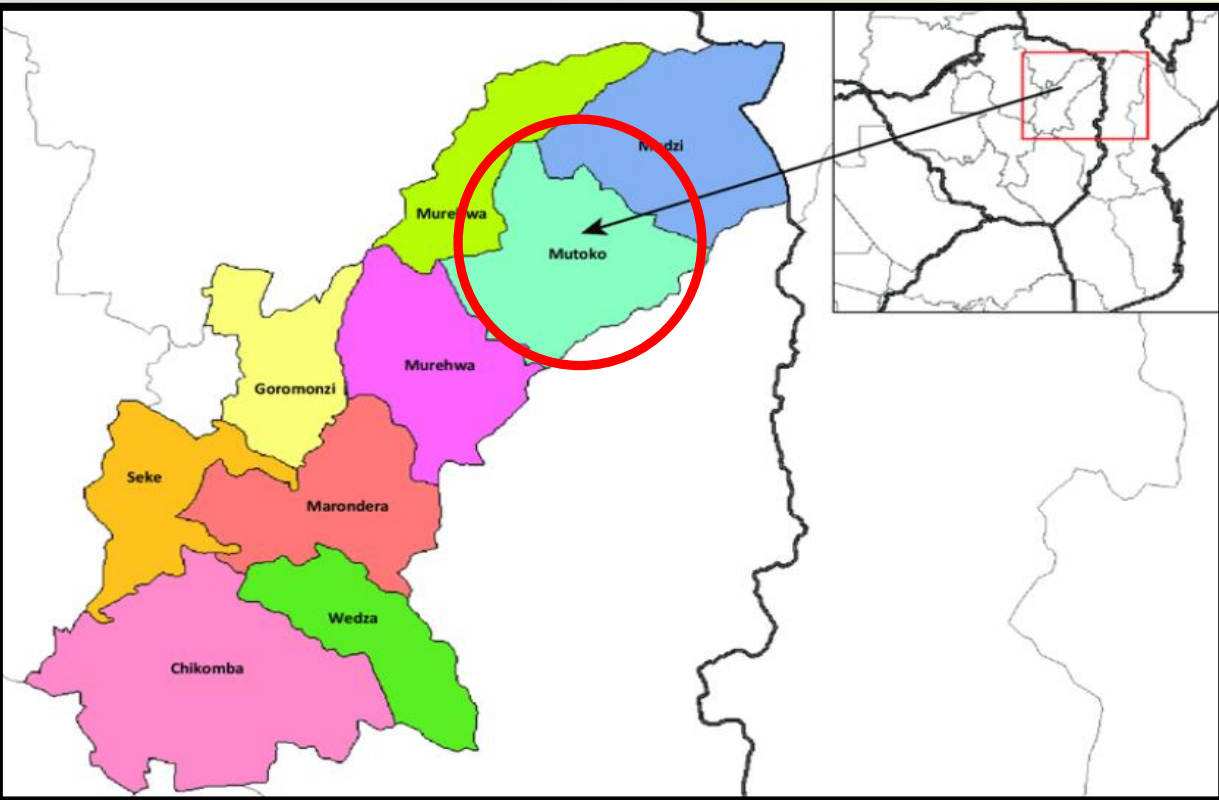

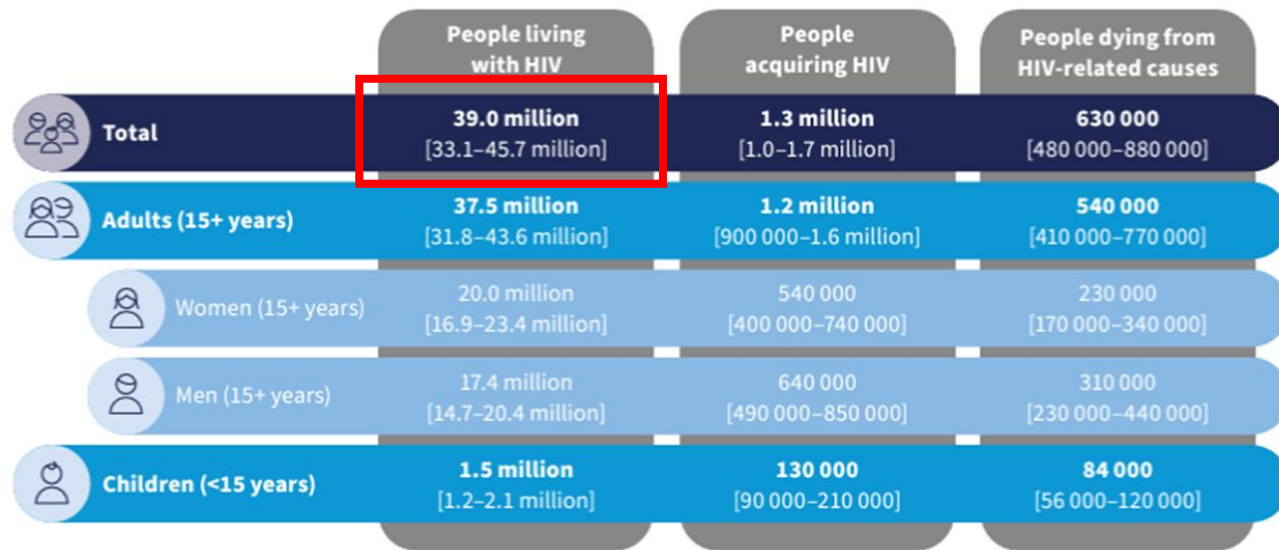

Fig 1. Summary of the global HIV epidemic, 2022

Source: UNAIDS/WHO estimates, 2023.

At a glance...

In 2022, **1,451,171** people were tested for HIV and learned their status, up from 1,345,889 in 2021.

Of those tested, **79,864 (5.5%)** were found to be HIV-positive, similar to the number in 2021.

94%

Of those who were found to be HIV-positive, **74,693 (94%)** were newly initiated on antiretroviral therapy (ART), up from 90% (72,405/79,634) in 2021.

Additionally, **77,349 early infant diagnosis** (were conducted for infants exposed to HIV in 2022, up from 48,873 in 2021, a 58.3% increase. This increase in EID testing helps to ensure that babies who are born to mothers living with HIV are diagnosed early and can start treatment as soon as possible.

UNICEF in Numbers

- Of Zimbabwe's population of 15 million, 54% are under the age of 20
- 1/3 of all new HIV infections are in Adolescents and Youth People (15-24yrs)
- 13% adult-HIV prevalence
- 90% maternal antiretroviral treatment (ART) coverage
- 8% mother-to-child-transmission rate, which is still high
- AIDS is a principal cause of non-neonatal child deaths
- Paediatric ART coverage is low
- Adolescent girls and young women are twice as likely to contract HIV than males
- Only 26% of the population access HIV-prevention programmes
- Stigma prevents adolescents accessing HIV/sexual reproductive health services

According to the 2022 spectrum estimates, **1,310,438** people are living with HIV.

HIV Treatment and Care

- In 2022, 43,570 women living with HIV received antiretroviral therapy (ART) to prevent **mother-to-child transmission (PMTCT)** of HIV, down from 47,639 in 2021.
- In 2022, 1,182,126 adults and children living with HIV received **antiretroviral therapy (ART)**, a 5% increase from the previous year. This increase is helping to save lives and prevent new infections.
- **Viral load (VL) testing coverage increased** from 44% to 79% in 2022, helping to ensure that people living with HIV are aware of their VL status and receive appropriate treatment and drug resistance monitoring.

- **1.3 MLN HIV+ (9% POPOLAZIONE)**
- **1.1 MLN IN TERAPIA ANTIRETROVIRALE**

- **TEST RAPIDI HIV**

- **MORTALITA' INFANTILE: 81 NATI SU 1000,**
CRESCIUTA DAL 61‰ ALL'81‰ NEGLI ULTIMI
20 ANNI

- **ASPETTATIVA DI VITA MEDIA : 43 ANNI,**
SCESA DI 20 ANNI DA INIZIO SECOLO

FONDAZIONE
MARILENA PESARESÌ

- 1932 NASCE A RIMINI
- 1961 SI LAUREA IN MEDICINA A BOLOGNA
- 1965 SI TRASFERISCE CON LA DOTT.SSA GUIDOTTI ALL'OSPEDALE DI MUTOKO
- 1983 SI RECA DEFINITIVAMENTE A MUTOKO SOSTITUENDO LA DOTT.SSA GUIDOTTI UCCISA DALL'ESERCITO DURANTE LA GUERRA
- 2012 - 2018 CONTINUA L'ATTIVITA' ADIUVATA DAL DOTT.MASSIMO MIGANI
- 2018 MUORE A RIMINI

LUISA GUIDOTTI HOSPITAL – ALL SOULS MISSION

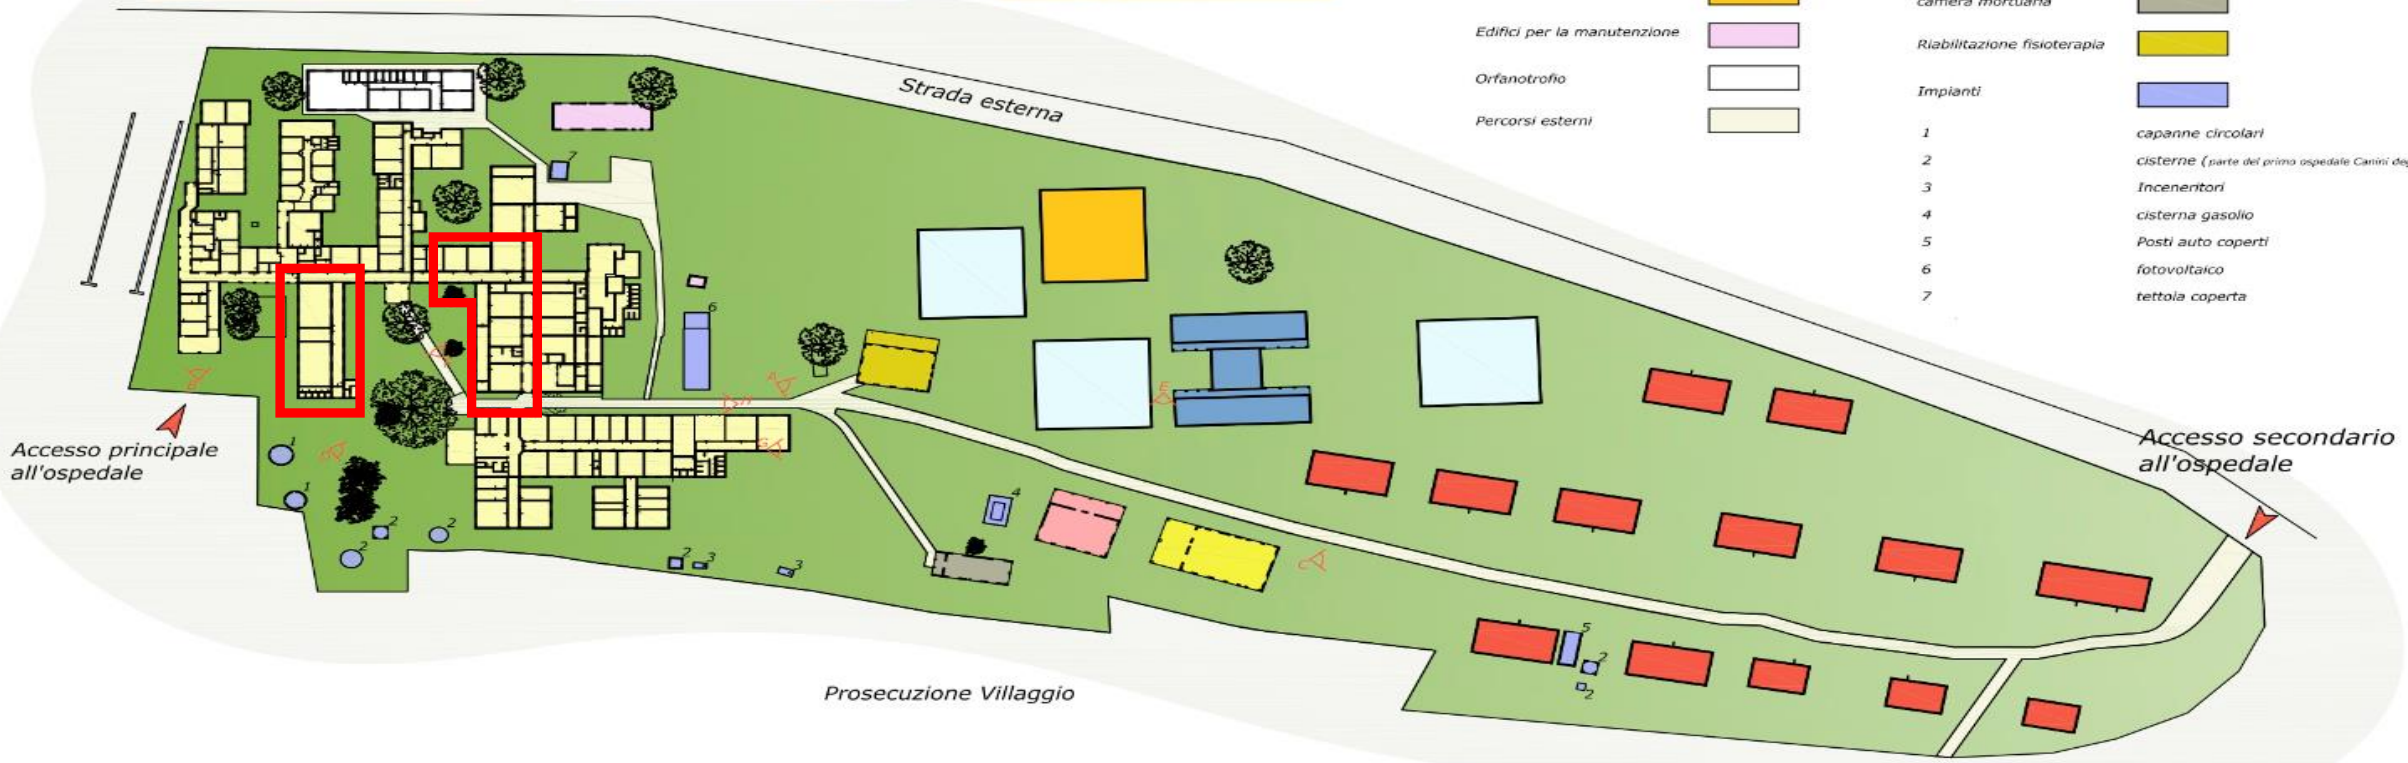

- SI TROVA A **MUTOKO**, MASHONALAND
- FONDATO NEL **1932**
- DAL 2014 DIRETTO DAL **DOTT. MASSIMO MIGANI**
- **170** KM DALLA CAPITALE
- **120** POSTI LETTO
- SERVE CIRCA **62.000** ABITANTI
- **700** PARTI ALL'ANNO
